**RE: Follets Island Dune Restoration Phase 1 Proposal**

Commissioner Payne and Mr. Tabara,

The Gannett Fleming (GF) Team is pleased to submit this proposal to perform geotechnical investigations services for the Follets Island Dune Restoration Project. GF has been working closely with the County Engineer Office and the GLO to finalize the design for the Follets Island Dune Restoration project.

Recently, GLO advised the team that they would require sampling of the in-situ sand in the project area to ensure the specification for the sand procured from external borrow areas is of like or similar characterization. DEC has received the attached proposal from Terracon to execute the field investigations, laboratory analysis and provide the required language for the sand specification.

Terracon's fee is \$3,298.75 for this effort.

Terracon will execute this work immediately and have complete this effort by September 1, 2024

Please refer all questions concerning this proposal to the POC listed below.
