INSERT PROPOSAL AND SCHEDULE

SCOPE OF SERVICES
CDBG-MIT Austin Bayou De-Snagging,
Brazoria County Precinct 1 and 2,
Brazoria County, Texas

Introduction:

Brazoria County, Texas (County) requested that GC Engineering, Inc. (GCE) provide professional engineering services for the design and construction services for Austin Bayou De-Snagging CDBG-MIT Project, located in Brazoria County, Texas. Project area is located within three (3) Brazoria County Drainage Districts as follows:

1. Brazoria County Drainage District No. 5 (Iowa Colony) (BCDD5) (approx. 2.3 miles of Austin Bayou),
2. Angleton Drainage District No. 1 (ADD1) (approx. 4.6 miles of Austin Bayou), and
3. Brazoria County Drainage District No. 8 (Danbury) (BCDD8) (approx. 9 miles of Austin Bayou).

Project location is shown in **Figure 1** and **Figure 2**.

Project Description:

The channels and overbanks of Austin Bayou generally consist of heavy growth with shrubs and trees. During storm and extreme weather conditions, this vegetative growth cause immense amounts of debris fall into the Bayou resulting in impeded flows and blocking the natural flow within the Bayou. The vegetative growth and debris have also resulted in rise of water surface elevations and increased water retention during rain events causing flooding within the watershed.

The intent of the proposed project is to improve drainage by removing these obstructions by “de-snagging” of Austin Bayou, for an approximately length of 83,740 linear feet (~15.9 miles). County intends to remove the debris from above the normal high-water line in the Bayou. The project will also include cutting trees within the stream banks, leaving the root bulb alone, hauling the cut trees, and mulching on Bayou banks.

The goal of the project is to prepare plans, specifications, and the contract documents to remove undesired growth and debris within the stream banks and to monitor de-snagging operations to reasonably restore/improve the flow of Bayou in order to reduce flooding and impacts to neighboring communities.

Proposed Work:

GCE attended a meeting with the County and three Drainage Districts on April 16, 2026 to discuss the proposed project scope. The specific project features relating to proposed future improvements were discussed during this meeting.

Discussions included the following:

- The majority of the project area can be accessed through barge along Austin Bayou from Bastrop to Flores Bayou. There are few roadways/ramps for barge access.
- The rest of the area needs to be accessed on ground.
- Ground access will also be required for hauling and disposal of debris.
- The tree branches and other debris that can be mulched can be spread over outside of the stream banks.
- Coordination with landowners will be required for access and for leaving some trees of significance.

The project design shall be performed in compliance with County requirements.

BASIC SERVICES

The project consists of “de-snagging” of Austin Bayou within the project limits (**Figure 1**). Proposed improvements are summarized below:

- a) Cutting trees at the bottom and leaving the root bulb as it is.
- b) Removing, hauling the cut trees, and off-site disposal, and
- c) Mulching tree branches and shrubs and spreading outside of the stream banks.

Following are the anticipated basic phase services for the proposed project:

A. Phase 1 – Preliminary Design

Preliminary Design Phase tasks are as follows:

1. Coordination and Data Collection

GCE shall obtain available information for the project area including:

GCE shall conduct a site reconnaissance to inventory the existing conditions including the following:

- Assessment of the nature and extent of plant growth and the extent of debris accumulation,
- Ground access for de-snagging equipment and hauling trucks.
- Potential constraints such as low clearance bridge crossings, need for tree clearing to access the project area, fences, and other potential obstructions.

2. Utility Coordination

GCE shall identify pipeline crossings along Austin Bayou based on the RRC website. GCE's work shall include the following:

- Show existing pipelines on the Project Layout (aerial base) based on the RRC website information.
- Provide the Project Layout to pipeline companies. It is assumed that no pipeline relocation/removal is required for the proposed work.

- d) Typical details and limits of de-snagging.
- e) Known pipeline utilities as revealed from the RRC website.

In addition, GCE shall propose a methodology for estimating the proposed de-snagging quantities and provide estimated quantities at the conceptual level. GCE shall submit the Conceptual Layout to be reviewed and approved by the County prior to GCE proceeding with the Final Layout.

Final Layout
